

STAT 2000 Section D01  
Basic Statistical Analysis 1  
Winter 2022

**CRN** 50650

**Instructor** Ankit Doshi  
Telephone: 204-474-8205  
Email: Ankit.Doshi@umanitoba.ca

**Web Page** UM Learn: <http://umanitoba.ca/umlearn>

**Office Hours:** Tuesdays 1:30 p.m. – 2:30 p.m.  
Thursdays 12:00 p.m. – 1:00 p.m.  
Fridays 10:00 a.m. – 11:00 a.m.

(or by appointment, excluding university holidays)

Office hours and exam review sessions will be conducted over Zoom at the following link:

<https://umanitoba.zoom.us/j/98900097670?pwd=SUUxekxydVl5dzhIL0xa0GE5U2EwQT09>

Meeting ID: 989 0009 7670      Passcode: stat2000

Office hours are drop-in. You do not need an appointment; simply join the Zoom meeting at the indicated time if you'd like to meet with me. If multiple people join at the same time, I will answer your questions in turn. If you need to discuss in private, please request an appointment for a different time.

If the above times are not convenient for you, please contact me to arrange an alternate time to meet. I will do my best to return all email or telephone messages within 24 hours.

## Calendar Description

This course is not recommended for students in certain programs (see the description of STAT 2150). The study of estimation and hypothesis testing procedures for mean and proportions in one, two and multiple sample situations, introduction to the analysis of variance; regression and correlation analysis; optional topics may include nonparametric procedures, design of experiments, probability models. Not to be held with STAT STAT 1150, STAT 2001. Prerequisite: STAT 1000 (C), or STAT 10001 (C).

## Teaching Philosophy and Goals

It is the desire of the Department of Statistics to present this course in a manner that emphasizes and illustrates the statistical analysis arising from “real-world” applications. Whenever possible, we will attempt to bring real-life examples and data into the classroom. Upon completion of this course students can proceed in many directions: to further intensive study of statistics, to one or more additional courses in statistics, to the use of statistical methods in other fields of study, or to being a consumer of statistical information in daily life. It is our objective to serve all of these diverse directions.

The course is designed to include basic topics deemed crucial for problem formulation and understanding of the foundations of statistical thinking and reasoning. The concepts of statistical analysis will be stressed. The course will place an emphasis on the development of critical thinking skills.

Software will be used in this course to aid in the analysis of data. The computer program that has been selected for this course, Microsoft Excel, is easy to use and is available free for use with Mac or Windows systems. The program also has many advanced statistical features that you will find useful in subsequent courses.

We are interested in feedback from you. If you can think of ways in which this course could be improved, please let us know.

## Evaluation

Assignments (best 4 of 5)	25%
Midterm Test	30%
Final Examination	45%

All assignments and exams will be done in UM Learn. All marks will be posted on the UM Learn gradebook.

The following are the minimum percentage grades required to receive each of the various letter grades: A<sup>+</sup> (90%), A (80%), B<sup>+</sup> (75%), B (70%), C<sup>+</sup> (65%), C (60%), D (50%).

## Exam Information

The midterm test will be held **Wednesday, March 23, from 6:00 p.m. to 7:30 p.m.** It will cover Units 1, 2, 3 and part of Unit 4 in the course outline and will consist of only multiple-choice questions. Students missing the midterm test for a valid reason will be permitted to write a deferred midterm at a later date.

The final exam will be 2 hours in duration and will be scheduled by the Registrar’s Office. It will cover Units 1 – 6, with emphasis on the material covered after the midterm. The final examination will contain both multiple-choice questions and a written component, in an approximate 70:30 ratio.

The midterm test and the final exam in this course require the use of LockDown Browser and a webcam (using a program called Respondus Monitor). The webcam can be built into your computer or can be the type that plugs in with a USB cable. More detail about the use of LockDown Browser and Respondus Monitor will be given by your instructor.

The midterm test and the final exam are **closed book**. You cannot use the course notes or access any websites, books or any other resources while writing. However, you will be permitted to prepare **two** pages of notes writing only on **one** side of each page (or one double-sided page). You can write notes, formulas, or anything else you want. The notes you write must be prepared by you – you are not permitted to use notes written for you by another student or anyone else.

You are also permitted to use a non-programmable scientific calculator, and any statistical tables provided by your instructor.

## Academic Dishonesty

It is important that you understand what constitutes academic dishonesty and that you are familiar with the very serious consequences. The following link describes various types of academic dishonesty (including plagiarism, cheating, inappropriate collaboration and examination impersonation), and offers several resources to help students understand and avoid academic dishonesty:

<http://umanitoba.ca/student-supports/academic-supports/academic-integrity>

The Student Discipline Bylaw, which describes the potential consequences of academic dishonesty, can be found at the following link:

[http://umanitoba.ca/admin/governance/media/Student\\_Discipline\\_Bylaw\\_-\\_2018-09-01.pdf](http://umanitoba.ca/admin/governance/media/Student_Discipline_Bylaw_-_2018-09-01.pdf)

An academic integrity and student conduct tutorial can be found at the following link. For this course, it is recommended in particular that you view the parts on Tests & Exams and Inappropriate Collaboration.

[http://umanitoba.ca/student/resource/accessibility/files/AI-Student-Conduct-Tutorial/story\\_html5.html](http://umanitoba.ca/student/resource/accessibility/files/AI-Student-Conduct-Tutorial/story_html5.html)

All students are required to complete a short Academic Integrity quiz in UM Learn. If you receive a score of 100% on this quiz, you will receive a 1% bonus towards your final grade in the class. The quiz must be completed by **Monday February 14 at noon**.

For any student that creates a Telegram chat group (or any other chat group), we ask that you disable the room during exam times. We also ask that any student joining a chat group uses their real name.

## Practice Questions and Assignments

Numerous practice questions (with solutions) will be posted for each unit. Students are strongly encouraged to try these practice questions on a regular basis.

There will be 5 assignments in this course, which students will access via UM Learn. The best four assignments are worth 25% of your final grade (equal weight). See the “Assignments” folder for the material covered on each assignment. The due dates are listed in the “Course Schedule” folder on UM Learn. Assignments submitted past the due date will not be accepted and there will be no make-up assignments. If you miss Assignments 1, 2 or 3 (with a valid reason), the weight will be transferred to your midterm. If you miss Assignments 4 or 5 (with a valid reason), the weight will be transferred to your final exam.

Assignments must be completed on your own. You can discuss assignment problems with me, but any discussion with your classmates must be limited to questions such as “Are there similar problems in the notes or practice questions to Question #1?”, and NOT questions such as “What did you get for Question #1?”. You are not permitted to copy down or take pictures of the questions. Use of online tutoring websites such as chegg.com is strictly forbidden and would constitute academic dishonesty.

## Technology Requirements

You will require the following minimum technological requirements for this course:

- A computing device where one can create and edit documents
- An internet connection capable of streaming videos and downloading software
- Access to a webcam and microphone

## Software Download

If you already have a version of Microsoft Excel on your computer, you don’t need to download it again.

To download Excel, go to <http://portal.office.com>, log in with your university email credentials, click on your initials in the top right corner, select View Account, then select “Office Apps” in the left panel, and then click Install Office.

The Analysis ToolPak for Excel 2016 is referenced in the Practice Questions for some units of this course. To install this add-in to Excel, please follow the instructions found at the following link: <https://support.microsoft.com/en-ca/kb/2431349>

## Supplementary Resources

The course notes completely cover all topics in this course. Supplementary online resources will be provided throughout the course and posted on UM Learn.

Online resources are provided only as an extra resource. They do not comprehensively cover the material needed for the course and they may cover topics differently than the course notes. **Where there are any discrepancies between the way topics are covered, please refer to the course notes.**

## Voluntary Withdrawal

The voluntary withdrawal date is **April 25** (by which time you will have received your marks for all five assignments and the midterm test).

## Copyrighted Material

All course notes, assignments, tests, exams, practice exams and solutions are the intellectual property of your instructor or the Department of Statistics. Reproduction or distribution of these materials is strictly forbidden without their consent.

## Recording of Class Lectures

Your instructor and the University of Manitoba hold copyright over the course materials, presentations and lectures which form part of this course. No audio or video recording of lectures or presentations is allowed in any format, openly or surreptitiously, in whole or in part without permission from your instructor.

The class recordings provided by the instructor are for your own personal use only. It is not permitted to copy or distribute the recordings.

## Class Communication

The University requires all students to activate an official University email account. Please note that all communication between your instructor and you as a student must comply with the Electronic Communication with Students Policy. Please see

[http://umanitoba.ca/admin/governance/governing\\_documents/community/electronic\\_communication\\_with\\_students\\_policy.html](http://umanitoba.ca/admin/governance/governing_documents/community/electronic_communication_with_students_policy.html)

You are required to obtain and use your U of M email account for all communication between yourself and the university.

## Student Accessibility Services

If you are a student with a disability, please contact SAS for academic accommodation supports and services such as note-taking, interpreting, assistive technology and exam accommodations. Students who have, or think they may have, a disability (e.g. mental illness, learning, medical, hearing, injury-related, visual) are invited to contact SAS to arrange a confidential consultation.

<http://umanitoba.ca/student-supports/accessibility>

## ROASS Schedule A

Schedule A of the Responsibilities of Academic Staff with regards to Students (ROASS) policies of the University of Manitoba lists resources and policies for students. It is important that you familiarize yourself with these resources and policies. Schedule A will be posted on your instructor's UMLearn page.

## Course Outline

### Unit 1 – Inference for the Mean of a Single Population

- Review of principles of statistical inference: testing and estimation, confidence intervals
- Statistical decisions: Type I and Type II errors and their probabilities, power of a test
- Review of  $t$ -distribution (comparison with normal distribution), tests and confidence intervals, robustness of  $t$ -procedure

### Unit 2 – Inference for the Means of Two Populations

- Matched pairs  $t$  procedures
- Inference for the equality of means in two populations when population variances are equal and when population variances are unequal, assumptions of normality and independence

### Unit 3 – Inference for the Means of Two or More Populations

- Graphical comparison of distributions
- Inference for the equality of means in two or more populations: introduction to ANOVA
- The  $F$ -distribution
- Equivalence of pooled two-sample  $t$ -test and  $F$ -test

#### **Unit 4 – Probability and Discrete Distributions**

- Review of probability concepts and rules
- Conditional probability
- Random variables, probability distributions, mean and variance of a random variable
- Review of binomial distribution

#### **Unit 5 – Analysis of Categorical Data and Goodness-of-Fit Tests**

- Inference for a population proportion
- Inference for comparing two population proportions
- Inference for  $(r \times c)$  two-way tables: tests of independence and homogeneity of proportions, chi-square test, expected values, degrees of freedom
- Equivalence of  $Z$ -test and Chi-square test
- Goodness-of-fit tests
- Binomial goodness-of-fit test

#### **Unit 6 – Regression and Correlation**

- Inference in simple linear regression (slope, confidence intervals)
- Analysis of residuals and use of diagnostic tools
- Multiple regression (time permitting)
